Grapple Skidder

Timber handling made easy.

Manufactured In the UK

A 3-point linkage Forestry Grapple Skidder allows the operator to pull out lengths of timber without leaving the seat of the tractor using a timber grapple mounted on a frame which can be quickly attached or removed when required.

Great for narrow access sites or when hauling timber over difficult or soft terrain, where a large forestry trailer is not an option.

Options available: Fixed or extending boom.
Fixed position grapple or rotating.
